

TSTR cross-model — matched-budget Pipeline B (2000 epochs, 9 trainable variants). TSTR LiteLSTM (1-layer, hidden=32) trained on synthetic OD windows; tested on held-out real OD. Mean $\pm$ std over 3 init seeds (40-42). Real-only baseline (n=65 real windows) plotted as dashed reference line in R^2 panel.

TSTR (matched-budget, Pipeline B) — R^2 (synth $\rightarrow$ real soft-sensor)

TSTR (matched-budget, Pipeline B) — MAE

TSTR (matched-budget, Pipeline B) — RMSE
